

ARCHOS and Sikur Celebrate Your Privacy with GranitePhone

Paris, FRANCE- October 9th 2015 – ARCHOS today announces the availability of the GranitePhone by SIKUR, allowing both companies to enter the global market of private communications smartphones, where the need for voice and data protection is a growing concern.

The GranitePhone, unveiled at MWC, has immediately attracted the attention of government, defense agencies as well as private companies and individual users concerned by their privacy, generating huge quantities of pre-sales on the Granitephone website.

With a 5inch screen Full HD, Granite OS, 4G and a 16MP camera the phone has all the latest hardware specs along with an unrivalled focus on security, eliminating loopholes which could allow data theft and spying.

The security architecture has been carefully designed with multiple layers of protection to mitigate security issues whilst still delivering the best in mobile technology today.

For additional flexibility, the device's data storage is also kept in an encrypted form in the cloud so that GranitePhone's users can access safely to their data from anywhere, using SIKUR applications.

They can do so from a computer and from other mobile devices, either Android and even iOS, which ensures great flexibility without compromising privacy.

"ARCHOS, through its subsidiary Logic Instrument is pleased to have been selected as industrial and development partner for this project as the demand for secured mobile solutions is increasing" says Loïc POIRIER CEO of ARCHOS.

"With GranitePhone, you can create a corporate digital environment, secure for the exchange of strategic information, without compromising productivity and speed offered by mobile devices," says Frederico D'Avila, CEO of Sikur.

The GranitePhone, the first smartphone entirely focused on user privacy can be ordered through the website www.granitephone.com
