

ARCHOS

ARCHOS Junior: a range made for children starting at €79.99

Paris –April 24th, 2018 - ARCHOS unveils today the ARCHOS Junior range, consisting of a tablet and a smartphone, dedicated to a younger public, for 3 year old children for the tablet and 7 year old children for the smartphone. In addition to an optimized hardware configuration, it includes a dedicated software offer: parental controls and web filtering from Qustodio, a search engine, and learning and academic apps (language, science and art), music, videos, coding. The ARCHOS Junior Tab and Phone will be available from June 2018 starting at €79.99 including VAT.

Parents' questions when it comes to choosing a first tablet can be overwhelming: how do we manage time spent on the tablet? How do we make sure our child doesn't secretly use the tablet or the smartphones once in bed? How can we be certain that our child will not be exposed to inappropriate content? How do we select age-suitable content? For those who choose the smartphone, other questions arise: how do we guide our child in its first steps on social networks? How do we put our child away from bad virtual encounters?

These are all genuine concerns for which ARCHOS teams have worked to identify the most relevant tools and programs for children. It has lead them to enter into agreements with partners, guarantying edutainment and security for parents and an attraction for children to discover, alone, or with family and friends, without becoming addicted to the screens.

Optimized hardware configuration

The ARCHOS Junior Tab and Phone include the essential components for a child's use: a quad-core processor supported by 1 GB of RAM and a storage capacity of 8 GB, expandable by Micro SD card, a

ARCHOS

10.1" screen for the tablet and 5" screen for the smartphone, a pleasant resolution to check web pages, enjoy applications, look at photos and videos. In addition, there are two cameras, a 4,000 and 2,000 MAh battery, various connectors, and numerous ports and sensors to ensure maximum comfort at home or when travelling.

Optimized content

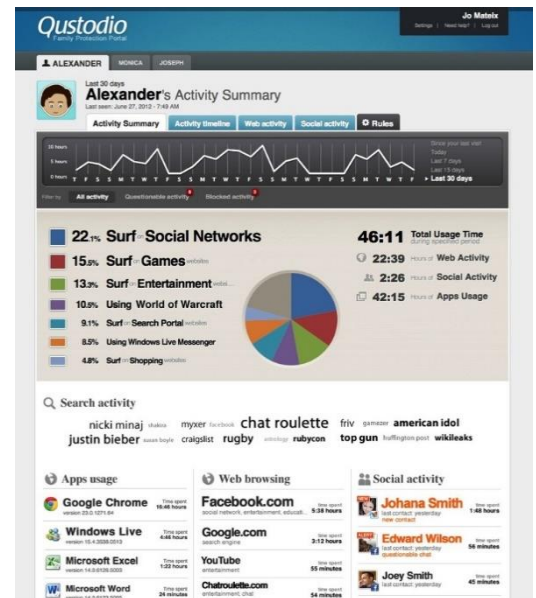

In addition to the application restriction modes, which can easily be configured from the Google Android operating system, in particularly the setting of Google Play according to the child's age, the ARCHOS Junior Tab and Phone include the best solutions for young people:

Parental Control

It is important for parents to be able to control the time their children spend in front of a screen and the quality of content they can access.

ARCHOS will offer its users the ability to use Qustodio for free for one year (subscription value: €42.95/year).

Qustodio is the leading parental control application used by more than 1.5M users worldwide. It allows parents to define slots while limiting the daily time spent on the tablet or smartphone. Parents have a dashboard, accessible from their smartphone or PC, to monitor the child's digital activity. With this powerful tool, parents can supervise, manage and look after with one click. Children are thus protected from the growing number of threats such as inappropriate content, online harassment, cyber-predators and addiction.

Secured Search Engine

Qwant Junior is a search engine dedicated to the children. It respects their privacy while facilitating discovery and sharing through a social approach. It allows them to better discover and surf the Internet from a real, modern, fast, and above all secure browser.

Qwant Junior technology ensures that children do not access sites and content those are unsuitable for their age when browsing. If the child tries to surf a page with inappropriate content, Qwant Junior blocks access and explains that the content in question is not adapted to their age and that

they must seek the opinion of an adult. True to Qwant's DNA, this free filtering system does not collect any personal data. To guarantee better security, the large online video platforms are only accessible in "restricted" mode, in order to optimize the protection of young users.

Videos

Youtube Kids is the video application specially designed for children. They can safely access their favorite cartoons, documentaries, music videos. It also allows parents to create multiple profiles based on the age of children in the family, to set which content may or may not be accessible to their children and for how long.

ARCHOS

Edutainment Applications

Because there are a multitude of applications for children and it is not always easy to know which one to select, ARCHOS offers a choice of applications with its Junior range that will allow children to have fun while awakening their curiosity and learning. Applications to learn languages, mathematics, drawing, the basics of computer coding, will be pre-loaded on the ARCHOS Junior Tab and Phone.

Availability and Price

The ARCHOS Junior Tab and Phone will be available from June 2018 in Europe on www.archos.com and on the shelves of ARCHOS distribution partners, starting at €79.99.

About ARCHOS

ARCHOS, a pioneer in consumer electronics, continues to innovate and revolutionize the consumer electronics market. Among others, the French manufacturer was first with an HDD MP3 player in 2000, a multimedia player in 2003, Google Android powered tablets in 2009, a connected Smart Home in 2014 and PicoWAN, the first collaborative network dedicated to the IoT, in 2016. Today, ARCHOS designs and democratizes solutions with high innovation value: tablets and smartphones, home and IoT, urban mobility and security of blockchains. With headquarters in France, offices in Europe and in Asia, ARCHOS has become a strong pan-European player. ARCHOS is quoted on Compartment C of Eurolist, Euronext Paris, ISIN Code: FR0000182479
