

ARCHOS unveils the Safe-T Touch the first hardware wallet for crypto-assets embedding a secured services platform

Paris – Tuesday, September 25th, 2018 – ARCHOS today announces the launch in January 2019 of its Safe-T Touch, the first secure hardware wallet with a touch screen, featuring an Android interface and an integrated services platform, for those who already hold crypto-currencies or who wish to open an account in crypto-assets.

"We want to democratize crypto-currencies, make information accessible, facilitate and secure exchanges to offer a turnkey solution to users," says Loic Poirier, CEO of ARCHOS.

Crypto-assets are currencies still difficult to understand

The public has not yet adopted crypto-currencies for the following reasons:

- How to buy crypto-assets and then how to exchange them for other currencies or to convert them into Euros?
- How to identify the transaction fees to be paid?
- Which platforms to use? How to be safe and avoid cyber criminality?
- How to maximize ROI with the launch of new crypto-assets and tokens¹?
- How to check all transactions from a single portfolio and benefit from additional services?

ARCHOS has designed the Safe-T Touch to answer these questions by offering a 100% integrated solution:

The ARCHOS Safe-T Touch is fully secured:

Designed in partnership with Prove & Run², the device embeds a secure, transaction-specific execution area, isolated from the Google Android operating system thanks to ProvenCore, the ultra-secure Prove & Run's TEE³ providing an unrivaled level of security.

It sports a fingerprint reader to authenticate its holder.

The device is never directly connected to the Internet: it only synchronizes with secured Bluetooth at the explicit request of its owner.

The ARCHOS Safe-T Touch will be an "All-in One" device:

Fully touch screen, the Safe-T Touch will provide a complete ecosystem enabling a full range of services: initiate and receive transactions, check balances and currencies' evolutions and also exchange crypto-assets.

¹ A token (or token) is a financial instrument used by companies to raise funds as part of an ICO (Initial Coin Offering).

² Prove & Run is a French company, the renowned specialist in cyber security.

³ TEE: Trusted Execution Environment

ARCHOS

Perspectives

The official launch of the ARCHOS Safe-T Touch will take place at CES 2019 (January 8-11, 2019, Las Vegas, USA).

ARCHOS also considers accelerating the promotion of its Safe-T Touch and its integrated services platform towards the community of crypto-assets' traders and fans by creating and animating an innovative recruitment program within the framework of an ICO.
